

SCUBA LUV DIVE REPORT SOUTH MAUI

“CRITTER OF THE WEEK”

“ PENNANT BUTTERFLYFISH“

These boldly patterned fish school along current-swept dropoffs, usually at depths of 40’, and feed on plankton. A large school makes one of the prettiest underwater sights in Hawaii. They will sometimes approach and surround a diver. Sub adults seek shelter in the heads of Antler Coral. They are sometimes mistaken for the Moorish Idol but they are completely unrelated. They grow to about 8”.
